Advancements

We are serving our clients for almost 2 and a half years. As we are continuously improving our services, Global Pathology Support keeps on growing. Staff and Office expansion has taken place, as well as major IT changes were performed in 2007 to provide even better services to our clients and improve efficiency in data management. All this in 24/7 secured office and archive space areas. A full daily data backup is assured on tapes via a closed IT-network.

Our satisfied customers are the testimony of our performance. We have carried out a number of evaluations, GLP-compliant studies concerned short-term, (sub-) chronic toxicity and carcinogenicity studies. Studies in a number of species were evaluated, Rats, Mice, Dogs, Minipigs, Rhesus - and Cynomolgus Monkeys, Ferrets and Cats.

GLP-compliance and facility inspections

On 22 November and 19 December 2006 respectively, internal facility inspections were performed by the QAU. The following issues were inspected: Archive, Equipment and Material, Entrance to Facility, Computerized Systems, SOP administration and Masterschedule. Responses were satisfactorily approved within the GLP-compliance criteria. We are prepared for next National Audit of the Dutch Food and Consumer Product Safety Authority (VWA).

Global Pathology Support is looking forward to be of continuous support for all our (new) customers. You are the most important to us as we strive towards professionalism, timely delivery, availability, flexibility and price competitiveness of our services.

1

People at Global Pathology Support

A new employee has joined us to reinforce our activities. Personal Assistant Officer, Miss Suzy Tirtodikromo¹ is responsible for logistics, contact with clients, archive, masterschedule, quotations, invoices, etc.

Our QA - Manager, Miss Dorrine Bogers³ is assuring GPL-compliance of the test site and performs all study and facility inspections. In her absence, this is taken care of by the QA-officer Miss Sabine Franken.

2

Have a look at the photo's from our employees and/or contributors whom without them this young company could not exist in the form in which is currently performing. Our staff is highly committed to achieve the best results in their area of expertise in order to provide you with the best overall result that meets your requirements.

Our external IT-support (both INSTEM LSS people; Pathology System support) as well as our IT-support centre are most helpful in maintaining a secure, stable and professional IT-environment.

Last but not least, they are all, without exception, pleasant people to work with!

Meetings

As member of the STP-PR committee and the ESTP Board, I would really encourage all to attend the STP and/or ESTP meetings. The last two meetings in 2006 Vancouver (STP) and La Grande Motte (ESTP) respectively were both a great success with contributions of scientists in the field all over the world, which are always very interesting and to update the knowledge in the field of Toxicologic Pathology.

The ESTP is a fast growing professional society in Europe, which is also active together with the STP and other professional societies in harmonizing the International Nomenclature for both proliferative and non-proliferative lesions. ESTP and the RITA-group intend to provide available data on nomenclature and the structural base (INHAND initiative) that can be used to establish this challenging project. After earlier initiatives on nomenclature already taken by the separate organizations, this is now a true initiative and opportunity on Globalization in the science of Toxicologic Pathology.

Histopathology evaluations

For Histopathology evaluations call:
Tel.: +31 (0)70 314 2404 or +31 (0)6 46149605

List of meetings:

- **ESTP/IFSTP** – Basel, Switzerland – Integration of Toxicopathology in Risk Assessment – The key to Success – 16–19 September, 2007
- **STP** – Westin Rio Mar, Puerto Rico – Toxicologic Pathology and Novel Technologies – June 9 (NTP– Satellite) – 14, 2007
- **NVVP** – Ede, The Netherlands, Pathologendagen 2007, 10–11 April, 2007
- **BSTP** – Cambridge, UK, BSTP Module 8: Liver, 26–30 March, 2007
